

DAX DATA AND VISUALIZATION

Create a column for Category type:

Structure	Formatting	Properties
1	Category Type = 'Order Details (1)'[Category]&"-"&'Order Details (1)'[Sub-Category]	

Create Revenue per order in Order Details Table:

Structure	Formatting	Properties
1	Revenue-per-order = 'Order Details (1)'[Amount]*'Order Details (1)'[Quantity]	

Create a Calculated column to categorize sale:

Structure	Formatting	Properties
1	Sales-Category = if('Order Details (1)'[Amount]>Average('Order Details (1)'[Amount]),"Above Average","Below Average")	

This sub-category type calculated is based on above mentioned formula's

The screenshot shows the Power BI Desktop interface. The 'Column tools' ribbon is active, showing the 'Category Type' column being created. The formula bar displays the DAX formula: `Category Type = 'Order Details (1)'[Category]&"-"&'Order Details (1)'[Sub-Category]`. The 'Data' pane on the right shows the 'Order Details (1)' table selected. The main view displays a table with the following columns: Order ID, Amount, Profit, Quantity, Category, Sub-Category, Category Type, Revenue-per-order, and Sales-Category. The table contains 20 rows of data, showing various orders and their details.

Calculated Measures:

- Order Count calculation :

```
1 count-of-order-id = count('Order Details (1)'[Order ID])
```

- Average Profit calculation:

```
1 Avg-profit-Delhi = CALCULATE(AVERAGE('Order Details (1)'[Profit]),'List of Orders (2)'[City]="Delhi")
```

- Profit Margin Calculation:

Structure	Formatting	Properties	Calculation
			1 Profit-Margin = <code>DIVIDE(sum('Order Details (1)')[Profit],sum('Order Details (1)')[Amount],0)</code>

- Max profit margin calculation:

Structure	Formatting	Properties
		1 Max-Profit-Margin = <code>MAXX(VALUES('Order Details (1)')[Sub-Category]),[Profit-Margin])</code>

- Year to date Calculations:

Year-to-datesales = `TOTALYTD([Total-SalesAmt],'List of Orders (2)')[Order Date])`

Using the above measures the calculated value is as below snap

Sales Performance Matrix:

New column has been created in List of Orders table & sales target table to achieve below sales performance matrix

Reason for creating separate matrix

When we create a matrix within this category either of the value is getting duplicated in order to overcome the failure I have created separate matrix
